

## VTRON

### VTRON awarded prize of communications applications by APICTA

(Hong Kong, 10 November, 2006) Media-Go Technology Ltd (Media-Go) announces that Vtron' VLINKEXPRESS product has been awarded 2<sup>nd</sup> runner up in the communications application section in Asia Pacific ICT Awards (APICTA) 2006 which was hold in the Macau Tower in November 2006.

VlinkExpress was developed by Vtron Yutsun Electronic Co. Ltd (Vtron) based on Windows platform and installed in Digicom 3000plus series processors. VlinkExpress can display the contents of multi-users' Windows' desktops on the large-screen display wall quickly and simultaneously in the mode of windows via network. It enables users to zoom, move, open or close the windows on the display wall with mouse or keyboard.

Media-Go, as one of the largest partners of Vtron in Asia and sole distributor of Vtron's Products in Hong Kong, Macau, India, and Indonesia etc is proud of sharing the graceful of getting this award. "VlinkExpress enhances the flexibility of the digital and video display wall system in our projects in the regions, this benefits the end users by providing multi-users' Windows' desktops capability to the display wall at lower cost", said Mr. Alvis Kwok, Product Manager of Media-Go Technology Ltd.

Media-Go and Vtron have teamed to drive the adoption of industry-standard large-scale Digital Display Wall System through joint development, testing and customer deployment of leading solutions in Asia. Media-Go continually invests in joint sales and market development. This close collaboration with Vtron's continual innovation in industry-standard computing have made Media-Go the partner of choice for the majority of businesses deploying Vtron's Display solutions.
